NABEEL AKRAM

Lead Quality Assurance Engineer - Mobile Applications | Native iOS/Android, Accessibility & Agentic AI Testing

Lead Quality Assurance Engineer with 7+ years leading Quality Gates and native mobile test automation across payments and SaaS platforms, with depth in iOS/Android testing (XCUITest, Jetpack Compose Testing) in Swift and Kotlin, accessibility (WCAG) and Agentic AI-driven test selection.

WORK EXPERIENCE

Lead QA Automation Engineer, iKhokha - a Nedbank Group company Nov 2023 - Present

Project: Card Acquiring & Merchant Payments Platform (24/7 day-of-operations payments, PCI-DSS scope, ZAR 20bn+ annually, internally built and vendor managed)

- Cut native regression time 35% by building iOS automation in XCUITest and Snapshot testing (Prefire), and Android automation in Jetpack Compose Testing and Snapshot testing (Paparazzi), in Swift and Kotlin.
- Cleared accessibility gaps across 15+ core merchant screens by testing WCAG compliance, VoiceOver and TalkBack screen-reader support, labels and contrast, and validating mobile web against Figma design systems in HTML and CSS.
- Compressed CI feedback time 30% by building the UI and API automation framework from scratch in Java and Python (Selenium, TestNG, JUnit, Cucumber), parallelised into Jenkins with failure analysis across device farms (Sauce Labs).
- Set and enforced Quality Gates across feature teams, governing 500+ traceable test assets in Jira, Xray and AIO, liaising with technical product owners, architects and release train teams on cross-dependency testing.
- Held vendor-managed payment integrations to defined entry/exit gates via REST and GraphQL API automation, backing acceptance with Contract Testing (Pact) and WireMock so integration risk surfaced at the pull request.
- Trimmed regression suite runtime 25% by applying Agentic AI and intelligent test selection, mentoring software engineers on automated testing and coding guidelines to prioritise shift-left and shift-right coverage.

Senior QA Automation Engineer, Zazmic Nov 2021 - Oct 2023

Project: Veed.io (SaaS video editing platform, scaling $15M to $40M ARR, microservices architecture)

- Rebuilt release testing from manual-only to automation-first: 70%+ coverage of 50+ critical workflows and execution time down 60%, on a Cypress framework built from scratch in JavaScript and TypeScript.
- Pushed post-release defects down 30% by aiming exploratory sessions at recently changed and historically fragile areas, prioritised by risk and informed by how the product was actually used.
- Removed environment instability as a release blocker by standing up pre-production environments that mirrored live topology and virtualising unstable microservice dependencies across Docker containers, VMs and on-prem hosts.

Project: Multi-Cloud Pricing Validation Platform (pricing accuracy validation, Amazon Web Services, Google Cloud, Azure)

- Took deployment failures down 35% and feedback cycles down 40% with CI/CD-integrated API and system test suites in Jenkins and GitHub Actions.
- Migrated a legacy Protractor and Jasmine suite to Cypress with zero coverage loss - reliability up 30% and execution time down 45%.

Project: IPG Mediabrands (Interpublic Group, $47bn media investment, 130+ countries)

- Automated regression for booking and room-management flows in Cypress, removing repeated manual verification from every release cycle.
- Mapped each business process flow to scenario coverage per user role, hardening the end-to-end booking journey from search and availability through reservation, amendment and cancellation.

Quality Assurance Engineer, Devsinc, Lahore Jun 2020 - Oct 2021

Project: KUDO (real-time, high-dependency meeting platform, 100+ languages, government and Fortune 500 users)

- Halved manual regression effort by introducing Selenium WebDriver and JUnit automation to previously manual suites, converting the highest-frequency meeting and session journeys first.
- Shortened QA sign-off from days to hours by embedding automated smoke and regression runs into GitLab CI and Jenkins pipelines, with source control in Git and Bitbucket.

• Eliminated a fifth of escaped defects by moving validation to the API layer with Postman, REST Assured and Swagger, backed by BDD scenarios in Cucumber/Gherkin that gave stakeholders readable acceptance evidence.

- **Software Quality Assurance Engineer, Aomata, Lahore** Feb 2019 - May 2020

Project: Cross-Platform Data Migration & Utility Applications (cross-platform migration and recovery, 10,000 concurrent user load testing, 300+ test cases per cycle)

• Stripped 40% off response time by running JMeter stress tests at 10,000 concurrent users, mapping degradation under real load and isolating bottlenecks pre-production.
• Lifted defect detection 18% by managing 300+ test cases per cycle in Jira and TestRail with full traceability to shifting requirements.
• Designed regression and functional suites for cross-platform migration and recovery scenarios, catching data-integrity issues across devices and operating systems.

TECHNICAL SKILLS

Mobile Testing & Native Frameworks: iOS (XCUITest, Snapshot Testing - Prefire), Android (Jetpack Compose Testing, Snapshot Testing - Paparazzi), Appium (Cross-Platform Mobile Automation) - Swift, Kotlin

Accessibility & Design Systems: Accessibility Testing (WCAG), VoiceOver & TalkBack Screen-Reader Testing, Mobile Web Testing, Design Systems Validation (Figma), HTML, CSS

API & Contract Testing: REST API Automation, GraphQL, REST Assured, Postman, Swagger, Contract Testing (Pact), Service Virtualisation (WireMock), Microservices Testing

Automation Frameworks & Languages: Selenium WebDriver, Cypress, TestNG, JUnit, Cucumber (BDD/Gherkin) - Java, JavaScript, TypeScript, Python

CI/CD, Device Farms & AI-Assisted QA: Jenkins, GitLab CI, GitHub Actions - Device Farms (Sauce Labs) - Agentic AI & Intelligent Test Selection, AI-Assisted Test Design (Claude, GitHub Copilot)

Practice, Governance & Cloud: Shift-Left & Shift-Right Quality Practices, Quality Gates, Risk-Based Testing - Jira, Xray, TestRail, AIO - Performance & Load Testing (JMeter) - Cloud Platforms (Amazon Web Services, Google Cloud, Azure)

EDUCATION

BS in Computer Science - Government College University (GCU), Lahore Sep 2014 - Jun 2018

CERTIFICATIONS

- ISTQB Certified Tester - Agile Tester (CTFL-AT)
- Selenium WebDriver with Java - Basics to Advanced + Frameworks (Udemy)
- The Complete JavaScript Course: From Zero to Expert! (Udemy)
